

Hands on Technical Lead / Senior Ruby Engineer with 13+ years of experience designing, building, and operating high traffic Ruby on Rails platforms across startup, scale up, and enterprise environments. Experienced in leading squads and cross functional initiatives across AI / LLM integration, platform reliability, performance optimisation, cloud infrastructure, and commercial delivery. Known for breaking down complex problem spaces, shaping architecture in large modular monoliths, aligning Product, ML, Clinical, Infrastructure, and Engineering stakeholders, and raising engineering standards through mentorship, observability, RFCs, ADRs, and operational discipline.

## EMPLOYMENT HISTORY

MAR 2026 – PRESENT

### Senior Software Engineer, Hexarad, Remote (London)

#### Hexarad — Senior Software Engineer / Technical Lead

Physician-founded UK teleradiology company helping the NHS address imaging capacity and reporting backlogs.

- **Technical lead for a production generative-AI radiology reporting pipeline**, taking a vision-language model from architecture to live NHS clinical workflows in five months on a platform handling ~1,000 CT studies per weekday.
- **Led technical direction across executive, clinical, product and external engineering teams**, working directly with Hexarad's COO, CTO and Clinical AI Lead, and with CTOs and Heads of Engineering at external AI/ML partners to turn business and clinical requirements into architecture, system contracts and rollout strategy.
- **Designed the safety and distributed-systems architecture for clinical AI**, including ghost-first validation against authorised radiologist reports, clinician-operated eligibility policies, audited model promotion, image-completeness gating, transactional dispatch, reconciliation, idempotency and re-inference semantics.
- **Built the AWS and platform infrastructure for production inference**, including an EC2 edge proxy, Consul Connect across AWS and two datacentres, Terraform provisioning, secure cross-account connectivity, WAF/fail-closed networking, and a versioned CI/SSM host-migration framework requiring no SSH.
- **Established production telemetry, SLIs/SLOs and operational tooling**, centralising non-PHI lifecycle telemetry, building a golden-signals New Relic operational view and per-case diagnostics, and replacing 33 ineffective alerts with traffic-aware SLO alerting suitable for clinical production.
- **Owned the pipeline through production and failure recovery**, taking the service live across four NHS hospitals, diagnosing complex supplier and distributed-system failures, and converting incidents—including an 8.5-hour supplier outage—into permanent resilience mechanisms and engineering guardrails.
- **Scaled engineering knowledge across a fully asynchronous team**, establishing a 106-document knowledge hub covering architecture, ADRs, onboarding, incident response and operational runbooks used by engineers, clinicians and operations staff.
- **Tech stack:** Ruby on Rails · Python · Go · AWS · Bedrock · Terraform · Consul · New Relic

MAR 2021 – AUG 2025

### Snr. Software Engineer, Indeed, Remote (London)

Continued from Syft post-acquisition, with expanded scope and platform scale.

- Acted as **hands-on technical lead** for a **four-engineer squad** within the Agency Portal module of a large Ruby on Rails monolith, shaping technical direction, breaking down projects, guiding implementation, and supporting engineer development.
- Led **technical delivery** across core job offering and agency partner systems, ensuring Time SLA compliance across complex, time-sensitive workflows.
- Worked regularly with other squad leads, Staff Engineers, Principal Engineers, Product, and ML teams to validate **architectural direction**, align implementation plans, and drive cross-functional delivery.
- Led the integration of **machine learning decisioning models** into the core offering pipeline, partnering with ML and Product teams to improve allocation accuracy and operational efficiency.
- Owned **platform reliability** and **observability** across business-critical workflows, designing SLOs, alerts, dashboards, and post-release monitoring using Datadog.
- Drove major performance improvements across underperforming Rails APIs, reducing response times from **1+ minute to sub-second** and improving system throughput and user experience.
- Contributed to the modularisation of a large Rails monolith using **Packwerk**, improving maintainability, domain ownership, and team autonomy.
- **Mentored** junior, mid-level, and senior engineers through design reviews, pairing, code review, and delivery guidance, supporting multiple promotions.
- **Tech stack:** AWS · Ruby on Rails · Sidekiq · Kafka · Snowflake · PostgreSQL · Datadog · ReDash · React, Distributed Systems · Observability · Performance Optimisation · Technical Leadership · Mentoring · RFCs · ADRs · Incident Response

OCT 2017 – MAR 2021

## **Snr. Software Engineer, Syft, Remote (London)**

Instantly connect job seekers with opportunities that match their availability and flexibility—**acquired by Indeed**.

- One of the **early technical members** of the startup, with **end-to-end ownership** from ideation to post-production, delivering high-impact solutions.
- Led development of key verticals, including workforce management, multi-tenant employer, and agency partner solutions.
- Designed and built scalable backend systems to support **real-time job matching** based on worker availability and employer demand.
- Took ownership of **production stability**, diagnosing and resolving live issues under load, implementing fixes and improvements to ensure reliable operation as usage scaled.
- Worked closely with Product and Design to translate evolving business requirements into reliable, scalable technical solutions.
- Played a key role during the **acquisition by Indeed**, ensuring platform stability, continuity of knowledge, and a smooth transition into a larger enterprise environment.
- **Tech stack:** Ruby • Ruby on Rails • PostgreSQL • Sidekiq • GoodJob • Kafka • AWS • Heroku • Datadog • New Relic • ReDash • React • Stimulus • REST APIs

JAN 2016 – SEP 2017

## **Software Engineer, The Ai corporation, Guildford**

Industry-leading fraud management service.

- Worked on an **industry-leading fraud management platform**, building and operating real-time systems used to assess and prevent fraudulent transactions.
- Designed and optimised **high-throughput, low-latency workflows** in a distributed system, significantly improving transaction processing capacity.
- Improved transaction processing performance by **10x**, enabling the platform to handle increased load while maintaining accuracy and reliability.
- Built and maintained **scalable APIs** supporting core fraud detection and decisioning functionality.
- Took ownership of **platform availability and system health**, improving reliability in business-critical, real-time environments.
- Collaborated closely with product and domain specialists to translate complex fraud rules and requirements into robust technical implementations.
- Contributed to improving **deployment and operational practices**, reducing risk and increasing confidence in production changes.

DEC 2013 – DEC 2015

## **Software Engineer, In4System, Wokingham**

Asset Management Software. The company had 850K social housing. Later acquired by the MRI Software.

- Led a large-scale migration from [ASP.NET](#) to Rails, standardising best practices and ensuring a smooth transition.
- Developed REST APIs for a remote mobile team, collaborating with cross-functional teams for seamless integration.

OCT 2012 – NOV 2013

## **Junior Software Engineer, Antix, Reading**

Antix lets consumers play native games on their STBs, TVs, phones, tablets and PCs.

- Developed a global online game platform with multi-language support, enhancing user access and engagement.
- Integrated social logins for seamless cross-device access, improving user experience.

## **SKILLS**

Ruby • Rails • PostgreSQL • API • Sidekiq • Telemetry, Heroku • AWS • Performance Optimisation • Mentoring,  
Cross-Functional Collaboration, System Scalability, Real-Time Processing, Code Maintainability, Technical Leadership,  
Machine Learning, Observability, Performance, Optimisation, Kafka, Terraform, Datadog, New Relic, ReDash, RFCs, Stimulus, REST APIs,  
ADRs, Distributed System, AI / LLM Integration, Incident-Response

## **EDUCATION**

2011 – 2012

### **Msc in Information System, University of Surrey, Guildford**

2008 – 2011

### **Bsc (hons) Computer Science, Anglia Ruskin University, Chelmsford**

2005 – 2007

### **Btech, Information Technology, Bracknell and Wokingham College, Bracknell**
